6 **Junk removal tool**  
7

8 This patent application claims an international filing date of  
9 1 April 2003 and a priority date of 2 April 2002. The present  
10 invention relates to downhole tools for use in removing junk  
11 from a well bore.  
12

13 When drilling or completing a well bore, it is accepted that a  
14 large amount of junk can be present within the well bore.  
15 Such junk may comprise debris which are generally considered  
16 to be small particles of such things as metal shavings, chips,  
17 twists or curls, together with particles of cement or scale  
18 which may have previously adhered to the walls of the casing  
19 or liner. In this group is included mud and other  
20 particulates found in fluids circulated within the well bore.  
21 A further category of junk is larger objects. These may  
22 include portions of tools which have been discarded or been  
23 broken within the well bore, or large sections of the tubulars  
24 which have been cut away when portions of the casing or liner  
25 have been milled or drilled, for example, following casing  
26 milling or window cutting. Additionally such junk can be  
27 produced after perforation.
